nr. ANV - 041 / 29 Octomber 2026

Technical Specifications for

Procurement of Software Solution - Development, Deployment and Support of the Digital Hub Service

29 Octomber 2026

1. Introduction

The **National Customs Association (ANV)** invites qualified and interested suppliers to submit an offer for the supply of the Software Solution specified in this Terms of Reference (ToR).

The purpose of this procurement is to acquire reliable and technically compliant service that meets the operational and technical requirements defined in this document. The selected supplier will be responsible for the delivery of the service in accordance with the required technical specifications, quantities, delivery schedule, and other conditions established herein.

The proposed service shall meet or exceed the minimum technical requirements specified in this ToR. Where applicable, the service shall include all necessary licenses, documentation, and components required for its proper installation and operation.

Bidders are requested to carefully review the technical specifications and procurement conditions and to provide complete information regarding the proposed service, delivery period, and financial offer.

The submitted offer should clearly demonstrate compliance with the requirements of this ToR and contain sufficient technical documentation to enable ANV to evaluate the proposed solution.

ANV reserves the right to request additional information or clarification regarding the submitted offers during the evaluation process.

2. Conditions

No	Condition	Recommended wording / requirement
1	Offer submission period	Offers shall be submitted within 4 calendar days from the date of publication/issuance of the tender.
2	Price structure	Prices shall include all costs related to delivery, installation, configuration, commissioning, licenses, accessories and other required services, except VAT.

3	VAT regime	The project is developed and financed by GIZ Moldova. The procurement shall be carried out under the applicable 0% VAT regime, subject to the relevant supporting documentation and applicable legislation.
4	Delivery period	The delivery period shall not exceed 10 calendar days from the date of contract signature.
5	Delivery	Delivery shall be completed through deployment on the Contracting Authority's server.
6	Partial delivery	Partial deliveries shall be permitted only with the prior written approval of the Contracting Authority.
7	Offer validity	The offer shall remain valid for at least 30 calendar days from the submission deadline.
8	Currency	The financial offer shall be submitted in **MDL (Moldovan Lei)** for bidders established in the Republic of Moldova and in **EUR (Euro)** for bidders established outside the Republic of Moldova.
9	Fixed prices	The offered prices shall remain fixed throughout the contract implementation period and shall not be subject to adjustment unless expressly provided for in the contract.
10	Payment conditions	Payment shall be made upon successful delivery, verification, and formal acceptance of the products and/or services, subject to the receipt of all required financial documentation.
11	Payment method	Payment shall be made by bank transfer within **5 business days** following the acceptance of the goods.
12	Technical compliance	The services provided shall fully comply with or exceed all minimum technical requirements set forth in the tender documentation.
13	Equivalent products	Where specific models or technologies are referenced, equivalent or superior alternatives shall be accepted, provided that the bidder demonstrates full compliance with all applicable technical and functional requirements.
14	Technical documentation	The Bidder shall submit official technical datasheets, product brochures, manufacturer documentation, or references to official online resources sufficient to demonstrate and verify full compliance with the required technical specifications.
15	Support	The software solution shall be covered by a minimum technical support period of twelve (12) months from the date of formal acceptance, unless a different support period is expressly specified for individual components or services.
16	Licensing	All software, subscriptions, and licenses provided under the Contract shall be genuine, legally obtained, properly licensed, and authorized for use throughout the validity periods specified in the technical requirements.
17	Inspection and acceptance	Software solution shall be subject to inspection, technical verification and functional testing before final acceptance.
18		
19	Bidder experience	The Bidder shall demonstrate relevant professional experience in the development and/or implementation of IT solutions of comparable nature, scope, and complexity.
20	Bidder eligibility	The Bidder shall meet the following minimum eligibility and qualification requirements:

		a) Be duly registered as a legal entity and legally authorized to provide software development and related IT services in accordance with the applicable legislation. b) Have successfully completed at least one (1) project of a similar nature and complexity within the last three (3) years, involving the development and/or implementation of a multi-role web platform incorporating functionalities such as user registration and management, document or application processing workflows, and/or online payment integration. c) Propose a qualified technical team comprising, at a minimum: • One (1) Backend Developer; • One (1) Frontend Developer; • One (1) DevOps/Deployment Specialist. Each proposed specialist shall have at least four (4) years of relevant professional experience in their respective field. A single specialist may fulfill multiple roles, provided that the required qualifications and experience are demonstrated and adequate resources are allocated to the project. d) Not be subject to bankruptcy, insolvency, liquidation, or similar proceedings. The Bidder shall confirm compliance by submitting a duly completed and signed Declaration of Eligibility and Absence of Conflict of Interest (Form C).
21	Subcontracting	Any intended subcontracting shall be declared in the offer and may be subject to prior approval by the Contracting Authority.
22	Confidentiality	The supplier shall maintain confidentiality regarding technical, network, security and organizational information obtained during implementation.
23	Deadline	02 November 2026 12:00
24	Submission procedure	All offers shall be either **electronically signed** or **duly signed and stamped**, as applicable, and shall clearly indicate the **date of signature**.
25	Submission	All offers shall be submitted electronically by email to contact@anv.md within the specified submission deadline.
26	Evaluation and Award Criteria	Offers will be evaluated based on: • **Technical compliance** with the minimum requirements of the ToR; • **Total evaluated price**; • **Support conditions**. Only technically compliant offers will be considered for award. The contract will be awarded considering the **lowest evaluated total price together with the shortest feasible delivery time**. ANV may request additional information or clarifications during the evaluation process.

Content of the Bid

- Administrative documents: Form A (Bid Submission Letter), Form C (Declaration) and a copy of the registration certificate or an extract from the register.
- Technical proposal (recommended up to 15 pages), including:
  a) understanding of the requirements, proposed solution and architecture;
  b) proposed technology stack, with justification for any deviation from the preferred stack;
  c) work plan with milestones;
  d) team composition and the experience of key staff (years and completed projects);
  e) at least 1 (one) reference of a similar project (description, client, year, link to the system or client contact);
  f) approach to testing, security and support, and confirmation of the service levels.
- Financial offer: Form B, in MDL or EUR.
- Bids must remain valid for 30 (sixty) days after the submission deadline.
- Bids may be submitted in Romanian, English or Russian.

FORM A. BID SUBMISSION LETTER

To: National Customs Association of the Republic of Moldova

Tender No. ___

We, the undersigned, have examined the tender documents and offer to provide the services in accordance with the Terms of Reference for the total price stated in our Financial Offer (Form B).

We confirm that: our bid is valid for 60 (sixty) days after the submission deadline

Bidder	**Details**
Bidder (full name)	
Country and registration No.	
Address	
Authorized person, position	
Contact person, email, phone	
Signature and seal (if any)	
Date	

FORM B. FINANCIAL OFFER

Tender No. ___ . Bidder: _____

No.	**Item**	**Price, EUR (no VAT)**	**Total, EUR (no VAT)**
A	Design, development, deployment, data transfer, testing, documentation, training and launch of the Platform		

B	Technical support for 12 months after launch		
	Total price (no VAT), EUR		

Signature: _____ Name, position: _____ Date: _____

FORM C. DECLARATION OF ELIGIBILITY AND NO CONFLICT OF INTEREST

To: National Customs Association of the Republic of Moldova

Tender No. ___

We, _____ (Bidder), declare that:

a) we are not bankrupt, in liquidation or in a similar situation;

b) we will immediately inform the Customer if any of the above changes during the tender.

Signature: _____ Name, position: _____ Date: _____

3. Technical Requirements

3.1. Project Description

The **Digital Transit Hub** is a web-based digital platform designed to facilitate cooperation, information exchange, and the management of international freight transit processes among participating countries and relevant stakeholders.

The platform aims to support the digitalization and optimization of transit-related procedures by providing a centralized environment for managing applications, documentation, service requests, communications, and related administrative processes.

The system shall support multiple categories of users, each with appropriate roles, responsibilities, and access permissions, ensuring secure and efficient interaction between platform participants.

The platform shall include, but not necessarily be limited to, the following functionalities:

a) **User Registration and Management**

- Registration and management of individual and organizational users.
- Secure authentication and user verification mechanisms.
- Role-based access control and user permission management.
- Administration of user accounts, profiles, and organizational structures.

b) **Transit Application and Workflow Management**

- Creation, submission, processing, and monitoring of transit-related applications and requests.
- Uploading, storing, and managing supporting documentation.
- Management of transit routes involving multiple countries.
- Assignment of applications and requests to authorized service providers or responsible users.
- Tracking of application statuses throughout the relevant processing stages.

c) **Dashboards and Administration**

- User dashboards adapted to specific roles and responsibilities.
- Administrative tools for managing users, applications, services, and platform content.
- Monitoring, reporting, and statistical functionalities.
- Search, filtering, and data management capabilities.

d) **Service Management and Financial Functionalities**

- Management and presentation of services offered through the platform.
- Configuration and administration of service-related information and applicable fees.
- Generation and management of invoices and other relevant financial documents.
- Integration with electronic payment systems, where applicable.
- Monitoring and confirmation of payment statuses.

e) **Public Website and Content Management**

- A publicly accessible website presenting information about the platform, its objectives, activities, and participating organizations.
- A content management system (CMS) enabling authorized users to publish and update website content.
- Publication of news, events, announcements, and other relevant information.
- Multilingual support, including English and Russian, with the possibility of adding additional languages.

f) **Security and Data Protection**

- Implementation of appropriate authentication and authorization mechanisms.
- Protection against unauthorized access and common cybersecurity threats.
- Secure processing, transmission, and storage of information.
- Logging and monitoring of relevant system activities.
- Compliance with applicable data protection and information security requirements.

g) **System Architecture and Technical Requirements**

- Development using modern, reliable, and widely supported technologies.
- Modular and scalable architecture allowing future functional enhancements and integrations.
- Compatibility with standard web browsers and commonly used devices.
- Deployment within the infrastructure designated by the Contracting Authority.
- Implementation of appropriate backup, recovery, monitoring, and maintenance mechanisms.
- Provision of technical documentation and deployment instructions.

Technology Requirements:

The Bidder may propose an appropriate technology stack based on established software development frameworks, databases, and infrastructure solutions.

Preference shall be given to technologies that ensure security, reliability, maintainability, scalability, and long-term sustainability.

Open-source technologies are encouraged where appropriate, provided that they meet the functional, technical, and security requirements of the project.

The proposed solution shall allow the Contracting Authority to maintain operational control over the platform, including access to its source code, databases, configurations, and deployment environment, in accordance with the contractual provisions.

3.2. Objective

Design and develop the Platform, deploy it on the production server under the domain mc-transit.world, transfer the agreed existing data (if any), check all integrations, launch the Platform and provide technical support for 12 months after launch.

3.3. Work to Be Completed

3.3.1. Analysis and design

- Analyze the requirements together with the Customer and prepare a short requirements specification (user roles, application statuses, notifications, payment flow).

- Design the system architecture and the database structure.

- Prepare UI/UX designs (wireframes or mock-ups) of the main screens for each role and for the public website, and obtain the Customer's written approval.

- Agree the detailed work plan with the Customer.

3.3.2. Development (functional requirements)

- Users and access: registration of individuals and legal entities with approval by the Administrator; login with JWT authentication and token rotation; OTP verification by email; password recovery; managers can add employees of their organization; role-based access for Administrator, Regional Manager, Customs Broker and users waiting for approval.

- Transit applications: creation and editing with file attachments; routes through several countries; assignment of a customs broker; multi-stage status flow with a history of status changes; email notifications on status changes.

- Services catalogue: customs broker services linked to transit countries, with prices, managed by the Administrator.

- Invoices and payments: automatic generation of invoices in PDF; online payment through a payment gateway agreed with the Customer and/or confirmation of bank transfers; change of payment status by the Administrator.

- Dashboards: a dashboard for each role; an admin board with search, filters, bulk actions and statistics (applications, statuses and payments by period and country).

- Public website with CMS: news, events, committee, participants, regional representatives and history pages, edited by the Administrator without programming, in English and Russian.

- Security: OTP brute-force protection, rate limiting, HTTPS only, secure password storage, protection against common web vulnerabilities (OWASP Top 10), log of administrator actions.

- Quality: responsive design for desktop and mobile browsers; support of the current versions of Chrome, Firefox, Safari and Edge; automated tests for the main backend logic; readable, documented source code.

- A staging (test) environment for the Customer to review the work during development.

3.3.3. Server setup and security

- Prepare the VPS: system update, time zone, NTP, swap if needed.

- Create a non-root deploy user, set up SSH keys, turn off password and root login.

- Set up the firewall to open only ports 22, 80 and 443.

- Install Docker Engine and the Docker Compose plugin.

- Prepare folders and access rights for database data, static files and media files.

3.3.4. Domain, DNS and TLS

- Point the DNS records of mc-transit.world to the server.

- Configure the domain in the web server, application allowed hosts, frontend URL and CORS/CSRF settings.

- Issue the Let's Encrypt certificate, turn on HTTPS with redirect from HTTP, and check automatic renewal.

3.3.5. Application configuration

- Prepare production environment variables: secret key, debug off, database, Redis and Celery URLs, email, SMS and payment gateway settings.
- Install PostgreSQL 15 or newer and make it available only inside the internal Docker network.
- Set up production logging with rotation.

3.3.6. Build and first start

- Build the backend and frontend images from the Customer's repository.
- Start the Docker Compose stack and check that every container works correctly.
- Run migrations, collect static files and create the administrator account.
- Load initial reference data: countries, services and public website content.

3.3.7. Data transfer

- Agree with the Customer which data is transferred (users, CMS content), if any.
- Export the selected data from the Customer's current website or files and import it into the new database.
- Check record counts, transferred records and files.

3.3.8. Integrations

- Set up the SMTP provider and sender domain records (SPF, DKIM), and send test emails.
- Set up the SMS provider and check OTP delivery by email and SMS.
- Check that background (Celery) tasks run correctly.
- Connect the payment gateway in test mode, then in production mode, and check payments and payment status updates.

3.3.9. Testing

- Test the main flows for each role: registration, application creation, status changes, invoice and payment.
- Check the public website in English and Russian.
- Run a basic load test (at least 100 concurrent users; 95% of requests answered within 2 seconds) and review server resource usage.
- Fix all issues found during testing.
- Support user acceptance testing (UAT) by the Customer on the staging environment.
- Run a basic security check (dependency vulnerability scan and OWASP Top 10 review) and fix all critical and high findings.

3.3.10. Backups and monitoring

- Set up scheduled PostgreSQL and media backups stored outside the server (at least daily, kept for at least 30 days).
- Test restoring from a backup.
- Set up uptime monitoring, container health alerts and disk usage alerts.

3.3.11. Launch

- Final check of configuration and data on the production server.
- Open the Platform for production use.
- Watch logs, payments and background tasks during the first 14 (fourteen) days after launch.

3.3.12. Documentation and training

- Write instructions for deployment, update and rollback.
- Describe the environment variables, backups and monitoring.
- Give the Customer the access details (credentials) and the infrastructure description.

- Write a short user guide for each role and for the CMS, in English and Russian.

- Hold an online training session (up to 4 hours) for the Customer's administrators.

- Transfer the full source code with its history of changes (Git repository).

3.3.13. Support (12 months after launch, may be extended under Section 9.2(e) of Part I)

- Fix errors in the Platform and issues related to deployment and configuration.

- Respond to server and service incidents: restarts, certificate issues, disk space, failed tasks.

- Apply security and dependency updates to the server and containers at least once a month, and urgently for critical vulnerabilities.

- Help with restoring from a backup if needed.

- Consult the Customer's administrators by email or messenger (up to 8 hours per month).

- Send a short monthly report on incidents, updates and Platform availability.

4. Timeline and Milestones

Bidders may propose shorter deadlines in their work plan.

5. Deliverables

a) the Platform deployed and running at https://mc-transit.world, and a staging environment;

b) full source code in a Git repository controlled by the Customer, with the history of changes;

c) requirements specification, architecture description and approved designs;

d) deployment, update and rollback instructions; description of environment variables, backups and monitoring;

e) user guides for each role and for the CMS, in English and Russian;

f) test report, including load test and security check results;

g) all access details (credentials) and the infrastructure description;

h) list of third-party components and their licenses.

6. Service Levels (Support and Warranty)

Priority	Examples	Response time	Resolution or workaround
Critical	Platform not available, data loss, security breach, payments not working	4 hours, 7 days a week	24 hours
High	A main function does not work for a role (applications, OTP, invoices), expired certificate, failed background tasks	8 business hours	3 business days
Normal	Minor errors, display issues, questions, small configuration changes	2 business days	10 business days or the next planned update

- Support hours: business days, 09:00–18:00 Chisinau time; critical incidents are handled 7 days a week.
- Requests are sent by email; critical incidents are also reported by phone or messenger. The Contractor names the support contacts before launch.
- Availability target: 99.5% per month, excluding planned maintenance announced at least 48 hours in advance.
- Monitoring alerts are sent to both the Contractor and the Customer.

4. Final Provisions

Bidders are expected to carefully review all requirements specified in this Terms of Reference and submit a complete offer demonstrating compliance with the requested technical, organizational, delivery, warranty, and commercial conditions.

The bidder shall be responsible for ensuring that all proposed solutions complete, and suitable for the intended purpose. Any components, accessories, licenses, or other items necessary for the proper operation of the proposed solution shall be clearly identified and included in the offer, where applicable.

ANV reserves the right to request additional information, supporting documentation, or clarifications during the evaluation process in order to verify compliance with the requirements of this Terms of Reference.

The submission of an offer shall be considered confirmation that the bidder has reviewed, understood, and accepted the requirements and conditions specified herein.

The selected supplier shall deliver the service in accordance with the approved offer and contractual conditions. Final acceptance shall be subject to verification of the delivered equipment, quantities, technical compliance, documentation, and, where applicable, successful installation, configuration, and testing.

ANV reserves the right to accept or reject offers in accordance with the applicable procurement procedures and the conditions established for this procurement.
